

# CLEANING & CARE GUIDE FOR LASER EYE PROTECTION

## WHY IS IT IMPORTANT TO CLEAN LASER EYE PROTECTION PRODUCTS?

- Remove sweat, oils from your face or hands (or any other chemicals or products our equipment may have come into contact with – sunscreen, hair products, and other dust & debris)
- If a user doesn't regularly clean their laser eye protection products, they can compromise their vision (which can compromise a mission), or lead to scratches and damage on the lenses themselves

## HOW SHOULD I CLEAN MY LASER EYE PROTECTION PRODUCTS?

- Rinse the lens with tap water gently to remove any dirt or loose objects from the lens
- Blot the lens dry with a soft microfiber cloth to remove any smudges (better to blot the lens with a microfiber cloth to remove the moisture or allow to air dry)
- If a user has an anti-fog lens surface (like on the Riot/ Breaching or STEP-IN® Visors), the lenses should always be cleaned with moisture and a soft cloth

## WHEN SHOULD I CLEAN MY LASER EYE PROTECTION PRODUCTS?

- It's a good idea to clean after use, depending on activity and/or before you store your gear

## WHAT SHOULD I AVOID WHEN CLEANING MY LASER EYE PROTECTION PRODUCTS?

- Household cleaning solutions (a small amount of rubbing alcohol is ok)
- Vigorous rubbing when drying lens
- Leaving visors and lenses exposed to extreme elements like sun, hot, cold etc. (like on a dashboard of a car)
- Optical cleaning sprays that have more than 5% alcohol
- Shirts, towels, and other abrasive materials when drying lenses – a microfiber cloth is always preferred
- When washing the microfiber cloth that you use to clean your lenses, don't wash it with laundry detergent that contains fabric softener
