INSTALLATION INSTRUCTIONS

SKELETON ONE-HOLE SHROUD

Skeleton One-Hole Shroud is compatible with ACH style and other one-hole configuration helmets. Hardware Included: 1 screw, 1 t-nut

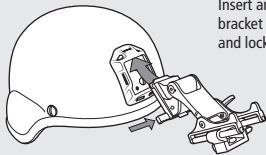

STEP 1: ATTACH SHROUD TO HELMET

Align the Skeleton One-Hole Shroud with the existing one-hole pattern on the front of your helmet. Insert the screw through the shroud from the front (outside) of the helmet shell and attach the t-nut from the inside of the helmet shell.

Finish by using a screwdriver to tighten the screw, making sure the Skeleton One-Hole Shroud is securely fastened to the helmet.

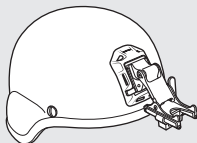

WARNING: DO NOT OVER-TIGHTEN SCREW

When tightening the screw, do not exceed 16 inch-pounds of torque to avoid damaging your helmet shell.

STEP 2: ATTACH NVG MOUNTING ARM

Insert and anchor the top of the NVG Mounting Arm underneath the top of the bracket as shown. While pressing the arm's release trigger, push down to snap and lock the arm in place.

STEP 3: TEST MOUNT TO ENSURE SECURE ATTACHMENT

Before attaching any NVGs to the mount, give the mount a sturdy tug in all directions to ensure it is properly secured.
